DAS for Year Round Polar Programs

**Quanterra Q330**

To record seismic data during the extremely cold Polar nights, the IRIS PASSCAL Polar Group relies on the *Quanterra Q330* digitizer due to its exceedingly low temperature tolerance. The Q330 is a 24 bit, 3 or 6 channel digitizer. In addition to its very low temperature tolerance, its very low power consumption makes it ideal for year round experiments in the Antarctic deep field.
