Programming a Texan with Mini-Hub

The Mini-Hub is functionally identical to the normal, full-sized, hub except it can only program 3 texans at a time (instead of the normal 15). It was designed in-house to act as a lightweight and more portable version of the full-sized hub for when field conditions require the texans to be backpacked into a remote site.

Programming texans is identical when using either the normal hub or the mini-hub. See the Texan Programming with Pocus page for more details.
